Overview

Clone     FluA-NP 4F1
Isotype   Mouse (BALB/c) IgG1κ
Immunogen Recombinant influenza virus type A nucleoprotein
Specificity Influenza virus type A nucleoprotein
Alternate Name(s) NP

Description

Influenza virus type A nucleoprotein, also known as NP, is composed of a 498 amino acid sequence and is type-specific in influenza viruses. The NP encapsulates the virus genome to form a ribonucleoprotein (RNP) particle for the purposes of transcription and packaging. The monoclonal antibody FluA-NP 4F1 has been shown to specifically recognize type A influenza virus NP in virus infected cell culture and patient samples. This clone can be paired as a detection antibody for ELISA with clone FluA-NP 2C9 (SB Cat. No. 10770-01).

Applications

- ELISA – Quality tested
- ICC – Reported in literature 1-4,6,7
- WB – Reported in literature 2,4,5

Other Applications

Since applications vary, you should determine the optimum working dilution for the product that is appropriate for your specific need.
Handling and Storage

- The purified (UNLB) antibody is supplied as 0.5 mg of purified immunoglobulin in 1.0 mL of borate buffered saline, pH 8.2. **No preservatives or amine-containing buffer salts added.** Store at 2-8°C.
- The horseradish peroxidase (HRP) conjugate is supplied as 1.0 mL in a stock solution of 50% glycerol/50% PBS, pH 7.4. **No preservative added.** Store at 2-8°C or long-term at -20°C.
- Reagents are stable for the period shown on the label if stored as directed.
