Rat Anti-Mouse CD49b

Overview

Clone: DX5  
Isotype: Rat (Lewis) IgMk  
Immunogen: NK cells isolated from C57BL/6 mice  
Specificity: Mouse CD49b; Mr 160 kDa  
Alternate Name(s): \( \alpha_2 \) integrin, VLA-2\( \alpha \), very late antigen-2, pan NK

Description

The monoclonal antibody DX5 reacts with CD49b, also known as very late antigen-2 (VLA-2) and \( \alpha_2 \) integrin. The antibody stains the majority of NK cells and a small subpopulation of T cells in all mouse strains tested (e.g., A/J, AKR, BALB/c, C3H/HeJ, C57BL/6, C57BL/10, C57BR, C58, CBA/Ca, CBA/J, DBA/1, DBA/2, SJL, SWR). Three-color flow cytometry analysis has revealed that most cells that express NK-1.1 (NKR-P1C) also express CD49b. However, small subsets of DX5\(^{-}\)NK-1.1\(^{-}\} and DX5\(^{+}\)NK-1.1\(^{+}\} cells can be found, especially among the CD3\(^{+}\} population of T lymphocytes. NK cells cultured in the presence of IL-2 progressively lose reactivity with DX5 as a consequence of cellular proliferation. Therefore, DX5 can be used to define functionally distinct subsets of murine NK cells. The monoclonal antibody DX5 has not been demonstrated to have activating or blocking activity.

Applications

Working Dilutions

Flow Cytometry  
FITC, BIOT, and AF488 conjugates \( \leq 1 \mu g/10^6 \) cells  
PE, APC, APC/CY7, and AF647 conjugates \( \leq 0.2 \mu g/10^6 \) cells

For flow cytometry, the suggested use of these reagents is in a final volume of 100 \( \mu L \)

Other Applications  
Since applications vary, you should determine the optimum working dilution for the product that is appropriate for your specific need.

C57BL/6 mouse splenocytes were stained with Rat Anti-Mouse CD49b-BIOT (SB Cat. 1806-08) and Mouse Anti-Mouse NK1.1-PE (SB Cat. No. 1805-09) followed by Streptavidin-FITC (SB Cat. No. 7100-02).
