Mouse Anti-Feline CD8

Overview

**Clone**
fCD8 (FT2)

**Isotype**
Mouse (CAF1) IgG1κ

**Immunogen**
Feline thymocytes

**Specificity**
Feline/Lion/Tsushima Leopard Cat CD8β; Mr 31 & 38 kDa

**Alternate Name(s)**
fCD8

Description

Feline CD8, a member of the immunoglobulin superfamily of cell surface receptors, is a type II transmembrane glycoprotein that is expressed as a heterodimer on the suppressor/cytotoxic subpopulation of peripheral T lymphocytes. It is present on approximately 76% of thymocytes, 14% of splenocytes, 1% of bone marrow cells, and 15% of peripheral blood lymphocytes. CD8 functions as a co-receptor with MHC Class I-restricted T cell receptors in antigen recognition.

Applications

- **FC** – Quality tested
  1.5-23
- **IHC-FS** – Reported in literature 2,3
- **ICC** – Reported in literature 1
- **IP** – Reported in literature 1
- **Sep** – Reported in literature 4

Working Dilutions

**Flow Cytometry**

- FITC and BIOT conjugates ≤ 1 µg/10⁶ cells
- PE conjugate ≤ 0.2 µg/10⁶ cells

For flow cytometry, the suggested use of these reagents is in a final volume of 100 µL.

**Other Applications**

Since applications vary, you should determine the optimum working dilution for the product that is appropriate for your specific need.
Handling and Storage

- The purified (UNLB) antibody is supplied as 0.5 mg of purified immunoglobulin in 1.0 mL of borate buffered saline, pH 8.2. No preservatives or amine-containing buffer salts added. Store at 2-8°C.
- The fluorescein (FITC) conjugate is supplied as 0.5 mg in 1.0 mL of PBS/NaN3. Store at 2-8°C.
- The biotin (BIOT) conjugate is supplied as 0.5 mg in 1.0 mL of PBS/NaN3. Store at 2-8°C.
- The R-phycocerythrin (PE) conjugate is supplied as 0.1 mg in 1.0 mL of PBS/NaN3 and a stabilizing agent. Store at 2-8°C. Do not freeze!
- Protect fluorochrome-conjugated forms from light. Reagents are stable for the period shown on the label if stored as directed.

Warning

Some reagents contain sodium azide. Please refer to product specific (M)SDS.
