Overview

Clone: 3-4F4 (Fel7)
Isotype: Mouse IgG1k
Immunogen: Feline T cells
Specificity: Feline/Lion CD4; Mr 65 kDa
Alternate Name(s): fCD4

Description

Feline CD4, a member of the immunoglobulin superfamily of cell surface receptors, is a type I transmembrane glycoprotein that is expressed on the helper/inducer subpopulation of peripheral T lymphocytes. It is present on approximately 55% of thymocytes, 15% of splenocytes, 40% of lymph node cells, and 25% of peripheral blood lymphocytes. CD4 functions as an accessory molecule in the recognition of foreign antigens in association with MHC Class II antigens by T cells.

Applications

FC – Quality tested 1,4,7-31
IHC-FS – Reported in literature 3-5
ICC – Reported in literature 2
IP – Reported in literature 1,2
Sep – Reported in literature 6
Block – Reported in literature 1

Working Dilutions

Flow Cytometry
FITC and BIOT conjugates ≤ 1 µg/10⁶ cells
PE conjugate ≤ 0.2 µg/10⁶ cells
For flow cytometry, the suggested use of these reagents is in a final volume of 100 µL

Other Applications
Since applications vary, you should determine the optimum working dilution for the product that is appropriate for your specific need.
Handling and Storage

- The purified (UNLB) antibody is supplied as 0.5 mg of purified immunoglobulin in 1.0 mL of borate buffered saline, pH 8.2. No preservatives or amine-containing buffer salts added. Store at 2-8°C.
- The fluorescein (FITC) conjugate is supplied as 0.5 mg in 1.0 mL of PBS/Na2HPO4. Store at 2-8°C.
- The biotin (BIOT) conjugate is supplied as 0.5 mg in 1.0 mL of PBS/Na2HPO4. Store at 2-8°C.
- The R-phycoerythrin (PE) conjugate is supplied as 0.1 mg in 1.0 mL of PBS/Na2HPO4 and a stabilizing agent. Store at 2-8°C. Do not freeze!
- Protect fluorochrome-conjugated forms from light. Reagents are stable for the period shown on the label if stored as directed.

Warning

Some reagents contain sodium azide. Please refer to product specific (M)SDS.
