Overview

Clone: 22A5
Isotype: Mouse (BALB/c) IgG2aκ
Immunogen: Osteoclasts from osteoclastomas
Specificity: Human CD13, Mr 150 kDa
Alternate Name(s): gp150, aminopeptidase N, APN, ANPEP
Workshop: N/A

Description

CD13, also known as aminopeptidase N, is a 150 kDa type II integral membrane glycoprotein. It is expressed on granulocytes, monocytes and their precursors, and on mast cells. CD13 is a zinc-binding metalloprotease that is involved in cell surface antigen presentation via its digestion of many MHC-bound regulatory peptides.

Applications

FC – Quality tested
IHC-FS – Reported in literature
IP

Working Dilutions

Flow Cytometry
- Purified (UNLB) antibody: ≤ 1 μg/10^6 cells
- FITC and PE conjugates: 10 μL/10^6 cells

For flow cytometry, the suggested use of these reagents is in a final volume of 100 μL

Other Applications
Since applications vary, you should determine the optimum working dilution for the product that is appropriate for your specific need.
Handling and Storage

- The purified (UNLB) antibody is supplied as 0.1 mg of purified immunoglobulin in 1.0 mL of borate buffered saline, pH 8.2. No preservatives or amine-containing buffer salts added. Store at 2-8°C.
- The fluorescein (FITC) conjugate is supplied as 25 tests in 0.25 mL or 100 tests in 1.0 mL of PBS/NaN₃. Store at 2-8°C.
- The R-phycoerythrin (PE) conjugate is supplied as 25 tests in 0.25 mL or 100 tests in 1.0 mL of PBS/NaN₃ and a stabilizing agent. Store at 2-8°C. Do not freeze!
- Protect fluorochrome-conjugated forms from light. Reagents are stable for the period shown on the label if stored as directed.

Warning

Some reagents contain sodium azide. Please refer to product specific (M)SDS.
