### Description

Influenza virus type B nucleoprotein, also known as NP, is composed of a 560 amino acid sequence and is type-specific in influenza viruses. The NP encapsidates the virus genome to form a ribonucleoprotein (RNP) particle for the purposes of transcription and packaging. The monoclonal antibody 1H7a can be paired as a detection antibody for ELISA with clone 3D7 (SB Cat. No. 10885-01).

### Applications

ELISA – Quality tested  
WB<sup>1</sup>

### Working Dilutions
